Nancy,

Here is the new map, it includes all the air quality sampling stations along the gulf coast provided by Region 4, and the two LDEQ locations in the NOLA area, along with the three locations proposed by START to be the operational air sampling and monitoring locations in south Plaquemines Parish. These three sites were chosen with operational effectiveness of one sampling/monitoring team and their priority to the location of the oil spill and in situ burn locations. Locations may be changed at the discretion of the EPA OSC and START-3 PTL, or based upon updated information and tasking.

Thank you
Alex

Sounds good. My mgmt want me to add a section about TAGA, ASPECT, and the fixed air sampling stations at the states in both our regions.

SESD is merging their comments right now and I will merge the final batch. My system of merging comments has been pretty efficient thus far, so I'm confident.

While all of the comments are substantive, there is one major formatting error. The numbering system unintentionally resets on SITE DESCRIPTION in the Table of Contents, this is likely due to the unrecorded insertion of "2.0 SITE LOCATION AND BACKGROUND" on page 1-2. I figured out a simple work-around without changing the entire page numbering scheme, so don't worry about all the red marks.

Just checking in to see how close y'all are to having comments. I don't mean to rush you - just checking.
